

Paris, June 12<sup>th</sup> 2019

**For immediate release**

## **RGREEN INVEST: both INFRAGREEN II and III funds have obtained the GREENFIN label**

The Greenfin label, created by the French Ministry of Ecological and Solidarity Transition, guarantees the "green" quality of investment funds and brings together financial actors who act for the common good through transparent and sustainable practices. This label, which only covers energy and ecological transition as well as action against climate change, now excludes funds that invest in companies in the nuclear and fossil energy sectors. It is exactly this approach that is enacted by RGREEN INVEST with its INFRAGREEN II and INFRAGREEN III, as well as its upcoming funds, that will be launched soon by the French asset management company.

Greenfin, the first national label dedicated to green finance (formerly known as the TEEC label for "*Transition énergétique et écologique pour le climat* ") was launched at the end of 2015 during COP 21. EY France, Novethic and Afnor Certifications are the organizations managing this label.

### **About RGREEN INVEST**

RGREEN INVEST, a French asset management company created in 2013 by Nicolas Rochon, is the first French financing platform for green infrastructures, enabling institutional investors to direct their capital towards financing projects related to the energy transition.

Primarily driven by climate issue concern, RGREEN INVEST supports entrepreneurs and project leaders in a long-term relationship, encouraging their progress on environmental, social and governance issues, both on their activity and their value chain. RGREEN INVEST enables institutional investors to participate in the energy transition while sharing the financial performance with them.

With around twenty experienced professionals from the fields of fund management, industry and banking, RGREEN INVEST has one of the largest teams of specialists in the financing of renewable energy production infrastructure projects in France. RGREEN INVEST has raised more than €600 million over the past 5 years and financed projects in France and Europe with an installed capacity of more than 1.5 GW, which enables to avoid around 400,000 tonnes of CO<sub>2</sub> emissions
