**RGREEN INVEST partners with the Climate Economics Chair
to support training and research efforts of its junior and senior researchers**

[RGREEN INVEST](#), an independent French asset management company specialized in investment and financing green infrastructures, joins the [Climate Economics Chair](#), a research platform dedicated to climate economics, to support training and research efforts of its junior and senior researchers.

“We are very proud to support the research efforts of the Chair” said Nicolas Rochon, Founder and Managing Partner of RGREEN INVEST. *“Training junior researchers dedicated to climate economics is essential to build a performing and environmentally-friendly economic system. Their publications will help inform decision-makers of the urgency to adapt our economies to climate change”* he continued.

A high-level research platform, open to the economic and political world

Launched in 2010, and founded by the Université Paris-Dauphine, the Climate Economics Chair is under the aegis of the Fondation Institut Europlace de Finance. Thanks to its academic recognition, the Chair provides a high-level debate platform between the academic and professional world.

Its main purpose is to train PhD students and interns from various backgrounds in climate economics. Moreover, it also intends to bridge the academic and public/private decision-making worlds by fueling the public debate with its scientific research, through the organization of seminars open to professionals and researchers.

The Chair’s research activities are organized into three different clusters that bring together a team of 20 permanent researchers and 15 associates, dedicated to specific themes and sectors, such as low-carbon innovation, agriculture, forests, and the energy transition.

About RGREEN INVEST

Created by Nicolas Rochon in 2010, RGREEN INVEST (part of the RGREEN Group) is an independent French asset management company specializing in green infrastructure financing. It was the first to offer a full range of tailor-made financing solutions and serves energy transition players across Europe. With around 20 experienced professionals, RGREEN INVEST has one of the largest teams of specialists in financing energy and climate transition-related infrastructure projects in France. With climate issues in mind, it places ESG at the very heart of its investment criteria, enabling institutional investors to take part in the energy transition while also sharing the financial gains. RGREEN INVEST has over €1 billion in assets under management and has financed projects

across Europe equivalent to an installed capacity of more than 2,4 GW, thereby avoiding the emission of almost 1,5M tons of CO₂* (according to its own internal calculations).

*Source: RGREEN INVEST, Estimates based on an internal calculation methodology. Please note that the quantity of avoided emissions that can be attributed to a renewable energy project financed by RGREEN INVEST is highly dependent on the emission factor of the country in which the project is located. Where renewables replace fossil energy capacities, in particular coal-fired thermal power plants, the avoided emissions will be high. Avoided emissions also depend on the renewable technologies deployed. That parameter explains why the emissions avoided by using wind power are higher than those for solar power, while the share those two technologies account for in RGREEN INVEST's portfolio is comparable.
